Located on the historic quad, Ranger Hall is one of the most visually striking of the original granite buildings on campus. Our new facility will open in Fall 2016.
Beginning in fall 2016, our $6.3 million, phase-one renovation of Ranger Hall will include the following state-of-the-art learning spaces:

**Living Room** *(see cover photo)*
Students, faculty, staff, and alumni are invited into a warm, welcoming gathering space designed to support our diverse community of learners, with large windows and comfortable furniture to encourage community interaction.

**Digital Innovation Lab**
With state-of-the-art equipment and seating for 22, this room will serve as a digital laboratory and teaching facility, staffed by our senior information technologist.
Open year round and into the evening hours every day, faculty and students will use this space to work together on research and media that enable them to create and test the design and impact of new forms of communication.

**Media Hub**
A one-stop center provides technology access and a training center for Harrington School students, staff, and faculty. Portable audio, motion picture, still photography, and highly specialized film, video, sound, and lighting equipment is available.

**Active Learning Classrooms**
Many students learn best by working in small-group, cooperative learning environments where they develop skills in creative collaboration. Multiple flat-panel displays, projections systems, and classroom furniture are designed for small-group work that involves the curation and creation of multimedia content.

**Screening Room**
Here, students can present the work they have created. It’s a classroom that seats 35, and is equipped with a large screen, an HD projector, and Dolby 7.2 surround audio. The Screening Room has the hardware and software to present works at any stage in the production process to showcase the students’ creations.

**Collaborative Editing Suites**
Video and audio editing rooms are outfitted with computer systems that offer basic and professional editing software, along with tools for video animation, audio recording, post-production, and image design.

**Audio Recording Lab**
This space contains special equipment and full sound-proofing, providing an ideal environment to capture, record, produce, and edit audio.

**Advising Center**
A walk-in center helps students select courses, acquire internships, and explore careers.
